

TETHER WDK CUP 2026 · FOOTBALL TRACK · DEADLINE
JUL 14

LA DOCE

Own a piece of your club's revenue. **Invest in USD₯, get paid in USD₯**, hold your own keys.

The 12th player isn't in the stands anymore — they're on the cap table.

12

Self-custody — platform holds nothing

30/30 contract tests, hardened

USD₯-native end to end

01

THE PROBLEM — WITH REAL MONEY

BANKS SKIP THE BARRIO CLUB. FANS HAVE NO WAY IN.

Small football clubs — second division, regional cups, neighborhood sides — are **real businesses**: gate takings, merch, fiercely loyal fans, room to grow.

But nobody lends them capital. The bank won't touch the neighborhood club; all that's left is expensive loan sharks.

On the other side: thousands of fans who want to back their club — and win alongside it.

There has never been an instrument to cross that gap. A huge void between the club and its people.

02

THE SOLUTION

TOKENIZED REVENUE-SHARE

A club raises capital in USD₯ and, in return, pays out a **% of a visible income stream** — the gate — for N months, up to a cap multiple.

The fan invests USD₯, receives an **ERC-20 token = their stake**, and claims their share of every payout — all in their self-custody wallet. No bank. No intermediary. The platform never custodies a cent.

The cold-start killer

The bank won't back the barrio club — **the fan will.**
They invest for love *and* return. That kills the trust problem that sinks every new marketplace.

03

WORKED EXAMPLE — FLOODLIGHTS

DEPORTIVO SAN MARTÍN

Needs capital for stadium floodlights. Issues a revenue-share round; 400 fans chip in ~USD₡ 100 each and get paid every matchday — automatically, in USD₡.

RAISING	USD₡ 40,000
REVENUE SHARE	8% of gate
CAP MULTIPLE	1.5×
BACKERS	~400 fans
PAYOUT	every matchday

04

HOW IT WORKS — THE DEMO

TWO ACCOUNTS, ONE LOOP

The fan

INVEST & GET PAID

Sign up → an embedded WDK wallet creates itself (Yape-style, no seed in your face) → fund USD₴ → invest in a club's round → hold the ERC-20 share → claim payouts → withdraw. The keys are always yours.

The club

RAISE & DISTRIBUTE

Sign up → collection wallet → publish a round (goal, %, cap, deadline). When the goal fills, the capital arrives. Push a distribution when the gate money lands.

The contract — RevenueShareRound — is an ERC-20 share with a claim-based dividend accumulator: gas-safe with any number of holders, **30/30 tests, adversarially hardened.**

THE WOW MOMENT

**CLUB DISTRIBUTES
REVENUE.
CONTRACT WITHHOLDS THE
AGREED %
AND SPLITS IT PRO-RATA TO
HOLDERS —
AUTOMATICALLY, ON-CHAIN.**

USD₯ lands in the fan's wallet. No oracle. No trust. Everything on-chain, everything in USD₯.

05

AUTOMATIC BY DESIGN

NEW

NOBODY FLIPS A SWITCH

Auto-close funding

GOAL HIT → CAPITAL SWEEPS

The moment a round reaches its goal (or its deadline passes), the raised USD₯ sweeps to the club **on-chain** — a permissionless call, sponsor-paid, no admin required. The database is corrected from the contract's real state, never trusted.

Club discovery

BROWSE CLUBS RAISING NOW

A homepage and a /clubs directory surface every club currently raising. Pick one, open the round, invest in a tap. The marketplace has a front door.

06

WHY WDK — THE CRITERION THAT MATTERS MOST

LA DOCE IS MONEY MOVEMENT. WDK IS THE MONEY LAYER.

SELF-CUSTODY, NO CRYPTO INFRA

Kills regulatory risk — we custody nothing.

YAPE-STYLE UX

Embedded wallet, no seed, no friction. A barrio fan invests without knowing what a blockchain is.

USD₪ AS THE UNIT OF ACCOUNT

Funding, payout, withdrawal — all in USD₪.

GAS IN USD₪, ZERO ETH

ERC-4337 paymaster (WDK). "The fan never touches another coin" is the production config, not a slogan.

07

WHAT'S BUILT — NO SMOKE

SHIPPED, NOT SLIDeware

Revenue-share contract (Foundry + OpenZeppelin) — 30/30 tests, adversarially hardened

✓ DONE

Web SaaS (Next.js) — club + fan accounts, server-gated roles (Better Auth)

✓ DONE

WDK self-custody wallet — seed encrypted (AES-GCM) in-browser, per user

✓ DONE

Loop invest → distribute → claim — tested end-to-end on local chain (anvil)

✓ DONE

Auto-close funding — goal hit sweeps capital to club, status self-corrects

NEW

✓ DONE

Club discovery — homepage + /clubs directory

NEW

✓ DONE

Dual-mode wallet (standard + ERC-4337 gasless) — code + reviewed; contracts on Sepolia

✓ DONE

Test faucets (USD₴ + gas) — run it with no real money

✓ DONE

Live gasless on Sepolia (gas paid in token) — pending Candide provisioning

⊕ PENDING

08

RISK #1 — WE NAME IT BEFORE THE JUDGE DOES

REVENUE-SHARE, NOT EQUITY

Issuing "shares" means stepping into securities regulation. So we start with **revenue-share / economic rights** — a light, non-custodial instrument — plus **self-custody**: the user holds their keys, the platform holds no funds.

Precedent not to repeat

Football Index collapsed as opaque gambling with no real ownership. Us: on-chain ownership, transparent, self-custody.

START WITH FOOTBALL. SCALE TO LATAM'S PRIVATE MARKET.

Football is the beachhead: clubs are small businesses with **emotionally committed fans**. The same engine works for any private company in Peru and Latin America.

A digital private market where any business raises capital and anyone invests from small tickets. Blockchain invisible; dividends in USD₴.

P2P

The ERC-20 share already opens the door to a **secondary market** — liquidity for holders — with no contract rewrite.

LA DOCE

THE 12TH PLAYER IS ON THE CAP TABLE.
